User Introduction

Thank you for participating in this usability study. Your participation will help us improve the design of our system, as well as improve our interface to make it more user-friendly.

The purpose of our system is to improve the user experience of presenters and participants in a video conferencing environment.

During the study, we will be observing your interaction with our two paper prototypes. We will be providing you with a few tasks that you need to complete with our prototypes. The prototypes are made out of paper so we will assist you with the flow of the system during the session.

- **Please think out loud as you use the prototype.** This will help us understand your thought process.
- **Feel free to point out anything you like or dislike.**
- **Use the prototype as you would at home**
- **There is no correct or incorrect way to do things.** Keep in mind that the purpose of this study is to uncover usability flaws of our designs, not to test your ability to use the system.

We will be recording today's session to further analyze the test results. The recording will be securely saved on a website that is only accessible by members of our class.

If you have questions, feel free to ask any of the observers for clarification.
<div align="center">Thank you again for your participation!</div>
